

Photogrammetric Computer Vision (PCV)

Assignment 4

Orientation of an Image Pair

Gruppe 18

Members:

Balkis Saidi (124785)

Ahsan Qadeer (123892)

Task 3:

- a) The epipolar lines are parallel and almost pass by the same points in both images. This means that for each point in the first image, its corresponding point in the second image can be found by looking at the epipolar line that crosses that point.
